With over 5 years of experience in the international startup ecosystem, I specialize in building robust, scalable products from the ground up. I am a language and framework agnostic engineer who prioritizes using the right tool for the job without ever compromising on technical integrity.

I began my career in 2019 translating high-level AI research papers into functional products. Since then, I have architected facial recognition systems, image processing pipelines, and LLM-based regulatory software for fintech startups across Europe and Asia.

Since the early 2020s, I have been a core contributor to the DeFi space. I started out designing yield farming algorithms and loan regulatory software for Nord Finance.
I joined BankX in late 2021 as the lead developer back when it was still just a white

Work history on Upwork

Summary   Show on profile ⬭

A top performing smart contract and Web3 specialist with expertise in blockchain architecture and full-stack development. Successfully led the development of investor-backed DeFi protocols generating over $120K, and deployed high-security smart contracts validated by leading audit firms [1] [2]. Specialized in Solidity, Ethereum, and DeFi integrations, utilizing tools such as Hardhat and OpenZeppelin. Leverages a multidisciplinary engineering background to deliver scalable, production-grade systems across the blockchain and AI domains.
